AI voice agent for call centers and phone desks

Even when calls surge, even outside business hours, AI supports first-line response.

AI answers routine and after-hours calls, records and summarizes them, and passes what needs a person to your staff.

How it works

The journey of one call

Customer calls
Someone phones your number.

→ **Call reaches the AI**
Routing rules decide which calls go to AI: all calls, a time of day, busy periods.
Set up together with you

→ **AI understands the request**
It answers from approved knowledge (FAQ).

→ **Answers the question**
Routine questions get a direct answer.

Takes a message, books a callback
Details are noted for staff.

Transfers to a person
For complaints and sensitive cases.
Planned

→ **Summary and record**
Staff review the call list and summaries next morning.

✓ Solid steps exist in the current demo. Planned steps are not built yet. The demo runs in the browser; a real phone-line connection is to be confirmed.

Interactive demo

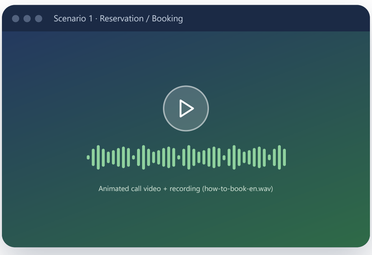

Hear a call being handled

Three real demo scenarios, shown together. Each plays the recording over the animated call video.

1

Reservation / Booking

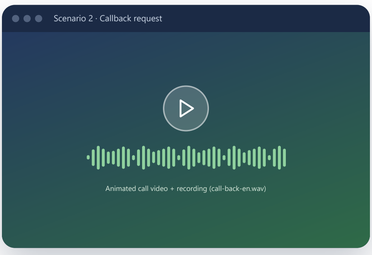

A caller phones at night, outside business hours.

2

Callback request

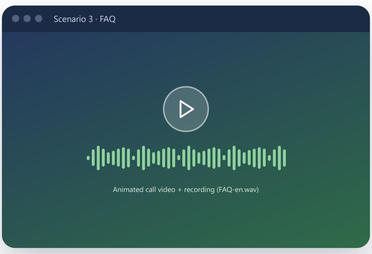

A caller cannot talk now and asks for a call back.

3

FAQ

A caller asks a routine question and the AI answers it.

Common challenges

Problems with traditional voice agents and phone desks

1

Call surges and waiting

At peak times calls do not get through and customers wait too long.

2

Missed after-hours calls

Calls at night and on holidays go unanswered and opportunities are lost.

3

More routine inquiries

Answering frequently asked questions takes up staff time.

4

Incomplete callback information

It is unclear who called, so callbacks cannot be prioritized.

TechMirai AI solutions

One answer for each problem

✓ Solves 1

AI answers first, even at peak times

AI gives first-line response and sorts calls, so fewer callers wait.

✓ Solves 2

After-hours reception and recording

AI answers night and holiday calls automatically and records them.

✓ Solves 3

Answers from approved knowledge

Routine questions are answered from information your team has approved.

✓ Solves 4

Summaries and callback scheduling

Each call is summarized, and callbacks are scheduled for staff to prioritize.

AI supports your people. Complaints, sensitive information and exceptions stay with staff.

Why AI

Human operator vs. AI operator

	Human operator	TechMirai AI operator Recommended for routine and after-hours calls
Availability	Set shifts and staffed hours	✓ After-hours reception by design, day or night
Response speed at busy times	Callers can queue when all operators are busy	✓ First response without a queue (design goal; figure to be measured)
Language support	Depends on who is hired	✓ Japanese and English
Scalability	More calls need more staff and training	✓ Takes more calls at once (capacity limits to be confirmed)
Operational cost	Grows with hours and volume	✓ Pricing not published yet [TBD]
Handling multiple calls	One call per operator	✓ Many calls in parallel
Consistency	Varies by person and fatigue	✓ Same approved answers each time
Complaints and sensitive cases	Strong: judgment and empathy	Handed to staff: AI supports, people stay close

Statements marked "design goal", "to be confirmed" or "[TBD]" need owner confirmation before launch.
